

Software Engineer (Backend)

TechCorp Solutions

LOCATION: Hyderabad, India | Hybrid

ABOUT THE ROLE

We are looking for a skilled Backend Software Engineer to join our growing engineering team. You will design, build, and maintain scalable backend services powering millions of users.

RESPONSIBILITIES

- Design and develop RESTful APIs and microservices using Python or Java
- Collaborate with frontend teams to integrate APIs
- Write clean, testable, and well-documented code
- Participate in code reviews and technical discussions
- Optimize application performance and troubleshoot production issues
- Contribute to CI/CD pipelines and DevOps practices

REQUIRED SKILLS

- 3+ years of backend development experience
- Proficiency in Python (Django/FastAPI) or Java (Spring Boot)
- Strong knowledge of SQL databases (PostgreSQL, MySQL)
- Experience with REST API design and development
- Familiarity with Git, Docker, and Linux environments
- Understanding of data structures and algorithms

PREFERRED SKILLS

- Experience with Redis, Kafka, or RabbitMQ
- Knowledge of cloud platforms (AWS/GCP/Azure)
- Exposure to microservices architecture
- Familiarity with Agile/Scrum methodology

EDUCATION: B.Tech/B.E. in Computer Science or related field

EXPERIENCE: 3–6 years
