

Data Engineer

DataStream Inc.

LOCATION: Pune, India | Hybrid

ABOUT THE ROLE

DataStream Inc. is seeking a Data Engineer to build robust data pipelines and infrastructure supporting our analytics and ML teams.

RESPONSIBILITIES

- Design, build, and maintain scalable ETL/ELT data pipelines
- Work with large datasets using Apache Spark and distributed computing
- Build and manage data warehouses (Snowflake, BigQuery, or Redshift)
- Develop data models and ensure data quality
- Collaborate with data scientists and analysts to deliver clean data
- Monitor pipeline health and optimize for performance and cost

REQUIRED SKILLS

- 3+ years of data engineering experience
- Strong SQL skills and data modeling knowledge
- Experience with Apache Spark or Flink
- Proficiency in Python for data processing
- Hands-on experience with Airflow or similar orchestration tools
- Experience with at least one cloud data warehouse (Snowflake/BigQuery/Redshift)

PREFERRED SKILLS

- Knowledge of streaming platforms (Kafka, Kinesis)
- dbt (data build tool) experience
- Familiarity with Delta Lake or Apache Iceberg
- Data governance and lineage tools

EDUCATION: B.Tech in CS, Statistics, or related field

EXPERIENCE: 3–6 years
